Summary

Senior frontend developer with **9+** years of experience, including 2+ years in the largest Russian marketplace.
Proficient in **Vue** ecosystem. Worked with **TypeScript**, **Storybook**.
Interested in **React** and **Unit-testing**.

Experience

Semrush

Senior Frontend developer (April 2022 – present time)

I develop a Listing Management tool. The tool allows you to distribute your business information automatically to the most authoritative directories such as Google Maps, Amazon Alexa, etc.

Tech stack: **JavaScript**, **React, Redux, Redux Saga**, **Rest API**.

Ozon

Senior Frontend developer (July 2019 – September 2021)

Ozon is one of the largest marketplaces in Russia.
As a part of its team, I've developed a page for postings control and made an interface for monitoring every aspect of sales flow in real-time. After that, I improved the user experience by separating reusable controls into the independent UI kit and polishing each component. Besides that, I've made a recommendation system for sellers, a commissions calculation page, and much more.

On this job, I've used **JavaScript**, **Vue**, **Vuex**, **Rest API, TypeScript**, **Storybook**, **Cypress**, **Lerna**, and **Yarn Workspaces** for monorepo.

Media Target

Frontend developer (April 2018 – June 2019)

Media Target is a company that develops many not big yet useful applications, for example, VPN browser extension that allows redirecting web traffic over other countries to avoid site blocking. I had had a good opportunity to get used to working with extensions and service workers.

There I started to work with **Vue** and **VueX**. I used **WebSocket** for real-time data, **Rest API** and popular **UI libraries** such as **Vuetify** and **Element**.

Languages

English: B2 — C1
200+ hours of speaking lessons.
Currently, I speak English at work.

Russian: Native

Goals

Write more Unit tests

Get skilled at React

Create reliable and useful applications.

ExactFarming

Frontend developer (April 2017 – April 2018)

ExactFarming is an advanced web application using by farmers to manage their fields and crops with the help of regularly updated satellite or drone photos. I've done some layers on the map — for example, photos with descriptions bound to geolocation data received by the Geolocation API. I've also made field editing and interactive manuals, showing app features with series of tooltips.

This application we've developed with **JavaScript**, **Rest API**, **Ember.js** and **Leaflet.js** for working with maps.

Breffi

Frontend Developer (May 2016 – February 2017)

A marketing company specialised in medical supplies.

Tech stack: **JavaScript**, **jQuery**, **CSS animations**.

Emias.info

Frontend developer (May 2015 – December 2015)

A doctor appointment app widely used in Moscow (400 000+ daily visitors).

Tech stack: **JavaScript**, **HTML**, **CSS**

Sijeko

jr. Frontend developer (March 2013 – May 2014)

Tech stack: **JavaScript**, **HTML**, **CSS**

Art. Lebedev Studio

ePub maker (contractor) (December 2009 – April 2012)

Tech stack: XHTML, Sigil epub editor, iBooks

Education

Belgorod Shukhov State Technology University
